

Integrate Visual Media into Your Lesson Plans

Teachers understand that integrating visual media into their curriculum increases retention of information; so teachers choose high-performing Califone overhead projectors and DVD players because they are dependable and effective learning tools in the classroom. Whether used for students or staff training, Califone provides the best options for integrating visual media into your presentations.

Luminos™ Overhead Projectors

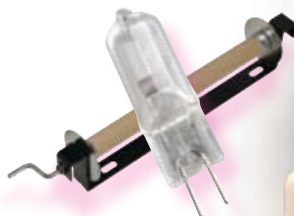

Even schools with new educational technology still depend on the overhead projector. Our projectors are built to withstand the rigors of a media cart or use in a single classroom, lab, or lecture hall. Many teachers prefer the overhead projector to the chalkboard as it makes their lessons easier for students to read from the back of the classroom. Choose from either of our budget-conscious models and let these presentation solutions complement your teaching. High quality triplet/singlet lens is housed in a sturdy open head container. Our open head projectors offer easy access for fine-focusing of images. There is a high/low brightness switch to extend lamp life. The rugged steel frame encased in sturdy ABS plastic and break-resistant glass means fewer interruptions and repairs. Dual whisper fans prevent overheating without interfering with instruction. If a lamp burns out during a presentation, there is a spare at the ready.

OHP-2000 2000 Lumens \$239
